GRGPF ALGORITHM

**MINNU PAUL**

GRGPF Algorithm

This algorithm assumes there is a distance measure D, but no recursion space. It also assumes that there is too much data to fit in main memory. The data structure is like a tree.

→ Node of tree → disk block  
→ And other different things of leaf and internal

GRGPF

The GRGPF algorithm is a simple method to cluster data. It is based on the idea of hierarchical clustering. The data is first clustered into small groups, and then these groups are merged together to form larger clusters. This process is repeated until all the data points are in a single cluster.
